Hi all,

Thanks for meeting with me this morning. I've attached the documentation of
public statements Tol has made over the past few months, that was looked at
this morning. It's been updated with a new tweet where Tol slurs the Insti-
tute of Physics (in fact, I note most of his public attacks are directed to-
wards IOP or the journal ERL).

Regards
John

wrote:=20

> Dear Peter,=20

>=20

> You have seen the PFO email by Dan Kammen.=20

>=20

> The authors have released only 43% of the data underlying the paper. =
Two parts in particular are missing: rater IDs and time stamps. Both are =
crucial to understanding the results.=20

>=20

> Only 24 people took the survey. Of those, 12 quickly dropped out, so =
that the survey essentially relied on just 12 people. The results would =
be substantially different if only one of the 12 were biased in one way =
or the other. The paper does not report any test for rater bias, an =
astonishing oversight by authors and referees. If rater IDs are =
released, these tests can be done.=20

>=20

> Because so few took the survey, these few answered on average more =
than 4,000 questions. The paper is silent on the average time taken to =
answer these questions and, more importantly, on the minimum time. =
Experience has that interviewees find it difficult to stay focused if a =
questionnaire is overly long. The questionnaire used in this paper may =
have set a record for length, yet neither the authors nor the referees =
thought it worthwhile to test for rater fatigue. If time stamps are =
released, these tests can be done.=20

>=20

> Could you therefore kindly remind the editor that scrutiny of results =
is a key part of science? It would be best to release all data to =
anybody. The authors' concerns about confidentiality strike me as bogus. =
However, if these concerns stand up, data could be released under a =
confidentiality agreement. The third-best alternative would be to tell =
the authors to perform the appropriate statistical tests themselves and =
report the results.=20

Hi Professor Lu, Ove,

Note: I've removed the VC from the recipient list as I deem it = inappropriate for Richard Tol to be bothering the VC over these trivial = issues.

Just to reiterate previous emails (and apologies for the repetition but = it is necessitated by Tol's persistence), upon receiving Told's original = request for data, I consulted with the Environmental Research Letters = (ERL) editorial board who advised me what data should be released in = order to replicate our results. All the data that ERL advised me to = release has been released. None of the data Tol is requesting is = required to replicate our results.

Tol's implication that UQ has something to hide is the latest in a long = line of insinuations and accusations of deceptions. When an independent = blog (whom I have no affiliation or contact with) recently published a = critique of Tol's attacks on our research, Tol accused me of secretly = creating the blog under a different name in order to give the impression = of a third party critiquing him. Overnight, he sent an email to = Environmental Research Letters claiming our concerns about preserving = the identities of volunteers was bogus. On the contrary, preserving the = privacy of participants is of extreme importance to human research and = in fact, several volunteers have directly requested to me that their = privacy be preserved.

I have complied with the data release advised by ERL and Tol has all the = data required to replicate our results. I believe Tol's persistent = correspondence has well and truly crossed the line into vexatious = harassment.=20

Regards
John Cook

 Content-Type: text/plain; charset="us-ascii"

Richard,

Please find attached data related to Cook et al. (2013). Apologies for =
 the delay which was due to the confluence of several factors.

Public release of data requires anonymisation to preserve privacy of =
 participants. This is especially the case with Cook et al. (2013). The =
 high profile of this paper, being highlighted by public figures such as =
 President Obama and the UK Minister for Energy and Climate Change has =
 resulted in intense interest in our research. Our private correspondence =
 has been illegally stolen and published online, resulting in a number of =
 online commentators republishing our private conversations.=20

This environment underscores the importance of taking the time to =
 properly ensure any publicly released data is properly anonymised. This =
 is necessary in order to adhere to the requirements of human ethics =
 application and to preserve the privacy of participants in the survey. =
 Your request also came, unfortunately, in an intensely busy period, =
 during which my academic obligations required I give presentations and =
 lectures at conferences in Colorado, Sydney, Melbourne, Zurich, Cortina =
 d'Ampezzo, Berlin, Potsdam and Brisbane. However, the busy period has =
 ended (finally) and I have been able to finish the process of releasing =
 the data.

Your request was for:

1. Ratings provided by the authors of the papers=20
2. The first and second ratings by our team (we rated each abstract =
independently twice)=20
3. Data of the randomly selected 1000 "no position" abstracts examined =
to determine which abstracts expressed an "uncertain on AGW" position=20
4. The rater IDs of each rating=20
5. The time stamp of each rating=20
6. The survey protocol
7. Lab notes & discussions that took place between raters

Upon receiving your request for data, I consulted with the editorial =

staff at Environmental Research Letters, requesting their evaluation of =
which data they deemed was of scientific value in reproducing the =
results of Cook et al. (2013). Environmental Research Letters advised =
that the following data should be released:

2. The first and second ratings by the Cook et al. team
3. Data of the randomly selected 1000 "no position" abstracts=20
6. Survey protocol

Regarding other requested data:

1. If anonymity couldn't be preserved, ERL advised the self-rating data =
shouldn't be released. However, I determined that it was possible to =
anonymise the data by releasing only the year, self-endorsement rating =
and self-category rating while omitting 6 papers that had unique =
combination of those 3 variables. This data was released on 8 July 2013 =
(<http://www.skepticalscience.com/Consensus-Project-self-rating-data-now-available.html>)
4. This data would potentially reveal the identity of individual raters =
(given that private correspondence of the raters had been stolen and =
published online)
5. and 7. were deemed unnecessary to replicate our results.

Consequently, I have released the following data:

http://www.skepticalscience.com/docs/tcp_allratings.txt

First and second ratings by our team. Ratings are ordered sequentially =
(e.g., in order that original ratings were made)

Column 1: Article Id #

Column 2: Original endorsement rating

Column 3: Original category rating

Column 4: Endorsement rating after consultation stage

Column 5: Category rating after consultation stage

http://www.skepticalscience.com/docs/tcp_1000noproposition.txt

Data of 1000 "no position" abstracts that were reexamined for =
expressions of uncertainty about AGW

Column 1: Article Id #

Column 2: Expression of uncertainty on AGW. 0 =3D no position expressed =
on AGW. 1 =3D expression of uncertainty

http://www.skepticalscience.com/tcp.php?t=3Drate_papers&a=3Dguidelines

Survey protocol (released on May 16)

http://www.skepticalscience.com/docs/tcp_articles.txt

Unique Id, Title and Year of Papers

Column 1: Article Id #

Column 2: Year of Publication

Column 3: Paper Title

Regards

John Cook=

I must confess, I do find Tol's comment of "almost 7 months since same = data must have been ready for peer review" somewhat annoying and = off-the-point. Publishing analysis of data in a paper and releasing raw = survey data that requires meticulous anonymising in order to adhere to = human ethics applications are two different things.

Irrelevant

Regards
 John

> =20

> Dear Prof Tol

> =20

> Thank you for your email, and I have consulted the people involved. =

Below is our response.

> =20

> The author has consulted Environmental Research Letters (ERL) and was advised that data on the first and second ratings=1B\$B!\$=1B(Band on the = randomly selected 1000 "no position" abstracts, would be sufficient to = reproduce the methods, but the other data would not be required to = reproduce the methods. The author intends to release the data as = stipulated by Environmental Research Letters. However, as he has advised = you earlier=1B\$B!\$=1B(Bthere will be a short delay as properly = anonymising the data takes time and your request came in an intensely = busy conference period for him. So your patience would be appreciated.

> =20

> It is also worth noting that the amount of data already released is = substantial. Upon publication of the paper, the entire dataset of = abstract ratings was released online, along with a search form allowing = users to easily examine the data in a user-friendly fashion. In the = spirit of reproducibility, the authors also created an interactive = feature encouraging users to rate the papers themselves and compare = their ratings to ours.

Personal information

As for his arbitrary August 4 deadline (he never did =
explain how he plucked that date out of the air), I have repeatedly =
tried to explain that I would look at the data release when I got back =
from Europe. It certainly is *not* a matter of minutes - protecting =
people's privacy is not something you can breeze through quickly in a =
rushed manner. I make no apologies for being careful about that.

I was planning on putting the individual ratings online - but not with =
rater IDs. I asked ERL what we should give Tol and they said I didn't =
need to give them that. So he won't be able to connect any single rating =
with a single person. If he didn't do it, plenty of other deniers on the =
web would.

ERL said I didn't have to include time stamp info but I'm probably going =
to anyway, just to show Tol's fatigue theory is all rubbish.

Re dragging my feet, I've repeatedly advised Tol that I am travelling =
and in the middle of an intensely busy period. I won't be back from =
Europe before August 4. While I'm sure Tol is an important guy (his =
twitter page does brag about his being the "Scholar most-cited by the =
Stern Review of the Economics of Climate Change"), there are a number of =
items on my academic plate that are a higher priority.

> =20

> Thank you for your email, and I have consulted the people involved. =
Below is our response.

> =20

> The author has consulted Environmental Research Letters (ERL) and was =
advised that data on the first and second ratings=EF=BC=8Cand on the =
randomly selected 1000 "no position" abstracts, would be sufficient to =
reproduce the methods, but the other data would not be required to =
reproduce the methods. The author intends to release the data as =
stipulated by Environmental Research Letters. However, as he has advised =
you earlier=EF=BC=8Cthere will be a short delay as properly anonymising =
the data takes time and your request came in an intensely busy =
conference period for him. So your patience would be appreciated.

> =20

> It is also worth noting that the amount of data already released is =
substantial. Upon publication of the paper, the entire dataset of =
abstract ratings was released online, along with a search form allowing =
users to easily examine the data in a user-friendly fashion. In the =
spirit of reproducibility, the authors also created an interactive =
feature encouraging users to rate the papers themselves and compare =
their ratings to ours.

Hi Paul,

I passed on the following note to Dan earlier but will repeat it here:

As I indicated to Richard Tol several weeks ago, I am in the middle of =
an intensely busy conference period. Yesterday, I completed a 30 hour =
flight to Germany where I will spend the next 20 days presenting at 3 =
consecutive conferences and in the preceding month, gave 7 presentations =
at 4 conferences in Melbourne, Sydney and Colorado. I mentioned my =
intense schedule to Richard several weeks ago when he set an arbitrary =
2-week deadline for all the data. I intend to publish the data agreed =
upon with the ERL editors when I complete the European conferences. His =
patience would be appreciated.

Regards

John

BTW, Ove, he's also hassling the publisher of the paper, the Institute =
 of Physics. I sent this email to Dan Kammen, the editor-in-chief of =
 Environmental Research Letters:

As I indicated to Richard Tol several weeks ago, I am in the middle of =
 an intensely busy conference period. Just a few hours ago, I completed a =
 30 hour flight to Germany where I will spend the next 20 days presenting =
 at 3 consecutive conferences and in the preceding month, gave 7 =
 presentations at 4 conferences in Melbourne, Sydney and Colorado. I =
 mentioned my intense schedule to Richard several weeks ago when he =
 (imperiously) set an arbitrary 2-week deadline for all the data. I =
 intend to publish the data agreed upon with the ERL editors when I =
 complete the European conferences.
